TERMO ORIGINAL
FALL & WINTER

2023

THE WARM SEASON IS HERE AGAIN.

At last! Now we can grab our gear and head comfortably into welcoming white landscapes. Snow and freezing temperatures are our best friends.

With more than 175 years of combined experience and expertise, we've learned not to freeze. We found materials and knitting techniques, and we designed products that transform outdoor days into pure pleasure. Socks, hats, and underwear for everyone, who, like us, loves to be outdoors but hates freezing.

We developed technically perfect socks knitted in wool and recycled polyamide. Wear our ski socks for longer, better days in the mountains. Choose running socks to keep the heat and grip during frosty runs. Toss on hiking socks to protect, transport moisture, and stay warm. We make this all happen with appropriate materials and functional, technical knitting designs.

We wear our beanies with heads high – thanks to their designs and carefully selected materials – so they work well in the mountains as in the cities. Our product range covers everything from technical caps with functional lining to lovely, woolly, fake fur hats with attitude. Wool, recycled polyamide (and sometimes fine, old original yarns are used in our Heritage collection) form the foundation of most of our hats.

We categorize base layers according to desired activities and functions. For example: high-intensity training during which moisture transport is more important than heat? Or, long days with quiet activities that require warmer underwear? Thumb grip or not? Hood, high collar, or round neck? We developed technical base layers that suit all professional and leisure requirements – from early autumn to freezing midwinter.

Welcome into the cold for a truly warm, comfortable season with Seger and Termo Original.

KNITTED IN A SWEDISH FOREST BY THE WIND

The forest has no finish line. Consequently, we'll never reach a final goal regarding environmental work. We want our planet to be the big winner.

Today all Termo products are knitted using fossil-free energy, environmentally certified wind power – in Sweden. Seger knits most of its products at the factory, where they're also sewn, finished, and packed.

We have a common environmental goal to work toward. We optimize logistics, minimize transport, maximize purchasing routines, and reduce waste. We're proud to be one of the few companies that still has its production in Sweden. It is an extremely conscious choice.

TECHNOLOGY IS OUR TRADITION

175 years – the joint age of Seger and Termo. We have gathered extensive experience during that long period. If you don't know what you're doing in our sector, you don't survive fierce competition, textile industry crises, and threats from cheap imported goods. It is all about an unrivalled combination of technology and tradition. To be able to look into the future and figure out what tomorrow's athletes and active people will need. Looking for new materials. Combining existing materials with each other to get new properties. Handling knitting machines the same way piano virtuosos handle their grand pianos. Creating our compression laboratory or working tirelessly with different material combinations to find optimal moisture transport between two layers.

It's about having technology as a tradition. In the blood. In the hands.

FUNCTIONAL DESIGN AND PERFORMING MATERIALS

Most of our design work is done to create garment functionality. Garments designed for varying activities, offering the best fit, comfort and performance. At the same time we maintain a high level of design via beautiful shapes, color palettes, and aesthetically-pleasing products.

Design is also about choosing the right materials. Materials for maximum moisture transport. Materials that keep warmth in a wet state – absorb and insulate. Technical materials that reduce chafing and knitted zones that dampen friction. Materials that facilitate mobility and support and protect vulnerable zones.

Few laboratories are better than Mother Earth. We use wool in many of our products, because nothing else can replace it – if you list all the attributes of this unique material. Warming and absorption capabilities. Anti-bacterial. Odorless. Naturalness. Durability. Look and feel. Environmental impact.

Issues that our design department deals with daily includes: Safety. Heat. Environmental impact. Moisture transport. Abrasion. Absorption. Durability. Comfort. Fit. Life span. Sustainability. Protective capacity. Seam location and strength. Leg, sleeve, and sock shaft lengths. Cuff widths. Heel flap lengths. And thickness of the needles to get exactly the right airy feeling in our knitted items.

SEGER HEAT

HEATED SOCKS

Knitted, high-tech warming socks for the coldest winter days. Created for all outdoors lovers who don't want to freeze their feet.

SegeR HEAT is the essence of SegeR's collective knowledge integrated into a sock. Made in Sweden and knitted with pure wind power. Socks in which natural and recycled materials are knitted together using state-of-the-art knitting technology and the latest innovations in wearable technologies and warm garments.

SegeR HEAT is primarily developed for use in the alpine world – and works just as well for other activities during which wearers spend a lot of time outdoors and need extra heat.

PERFORMANCE AND TECHNOLOGY IN KNITWEAR

The battery pack is attached with two magnets on the side of the sock above the boot edge. A folded, extra-long cuff protects the pack.

The battery's vibration function enables wearers to feel when heat is raised or lowered.

The vibration function also indicates phone calls when a phone is set to silent and stored in a pocket in which vibrations can't be felt.

InuHeat, a Swedish innovation company, developed the battery pack. The company is a world leader in portable technologies and heating garments. The batteries are good for up to 14 hours – depending on the outdoor temperature and the temperature at which the heat is set. Heat is seamlessly adjustable. Heat for the right and left foot can be adjusted individually via a cell phone smart app or directly on the battery. InuHeat developed the app, which enables connections with several types of heating garments that are controlled individually.

Created for alpine environments; also suitable for outdoor work and play.

Extra high, reinforced heel in half terrycloth. (Mid)

Half terrycloth in the foot. (Mid)

Left/right design.

Knitted in EXP-treated merino wool and recycled polyamide. Both materials leave minimal footprints on the environment during production. The socks are knitted in Røshult, Sweden, at Seger Europe's factory, which is totally operated with fossil-free environmentally certified wind power.

EXP-treated merino wool and RECO NYLON® provide a hygienic climate in boots or shoes. Merino wool is naturally antibacterial and minimizes foot odor. Reco Nylon increases durability.

Thinner knitting particularly practical in tight ski boots. Also suitable for other tight shoes. The heat stimulates blood circulation. (Thin)

Tibia padding reduces pressure on lower legs. (Mid)

Conductive wire leads heat from the battery to the toe area.

Foot specially knitted for optimized fit.

Warms the entire toe zone below and above for maximum effect.

THIS IS HOW SEGER HEAT SYSTEM WORKS

The batteries are attached to the socks with two magnetic mounts

Heat is regulated via a phone app or directly on the battery. Each sock can be adjusted individually.

The batteries are charged with a USB cable in a wall outlet or computer.

Battery time up to 14 hours.

KNITTED FOR YOUR FEET AND OUR PLANET

Durability, comfort, and function are just part of the picture when it comes to materials selection. Materials produced with special emphasis on ethical and environmental values are as important.

MERINO WOOL. The fine, silky texture and unique structure of the wool enables exceptionally high thermal insulation. This wool warms when it's cold and breathes when it's hot – thus enabling a constant body temperature. It has good moisture-wicking capabilities, which facilitate a dry, comfortable feeling next to the skin. Unlike other materials, merino wool warms even when damp. Creatine in the wool makes it naturally antibacterial and frees wearers from unpleasant odor in their socks.

WOOL Wool treated via EXP 4.0 contains fewer chemicals (e.g., chlorine) and uses up to 50% less water than older treatments – to make wool that withstands machine washing and drying. EXP 4.0 is the first wool treatment that meets these rigorous standards: Bluesign®, Global Organic Textile, and Oeko-Tex.

RECO NYLON yarn is one of the most eco-friendly alternatives to classic yarn. Reco nylon yarn consists of 100% recycled polyamide, made from waste from the textile industry. Reco Nylon manufacturing reduces use of resources, such as water, chemicals, and electricity by an average of 89% compared to manufacturing ordinary polyamide. Extremely durable socks made using Reco Nylon provide a high level of comfort.

SEGER HEAT THIN COMPLETE SET 6021032

THAT SEGER HEAT FEELING

KNITTED USING 100% PURE WIND POWER FROM 100% RECYCLED POLYAMIDE.

Everything comes back, in one way or another. Just like one big circuit. That is why it is important to make conscious choices. In our case, for example, our new Seger Sense products are made from waste from the textile industry, which would otherwise have just been thrown away. Now those scraps become high-tech eco friendly ski- running and hiking socks instead. All with phenomenal wear resistance and comfort.

Reco Nylon, developed by technology company NUREL, is one of the most eco friendly alternatives to classic yarn. Allow us to tell you why.

89% Reco Nylon reduces by an average of 89% the use of resources, such as water, chemicals and energy consumption, in the manufacturing process.

88% Carbon dioxide emissions are reduced by 88% and waste by 96% compared with conventional production.

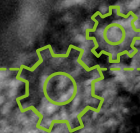

96%

Reco Nylon also markedly reduces the impact on water, air and the ozone layer through its manufacturing process. All raw materials come from the vicinity of the factory, which is powered entirely by renewable energy – just like our own factory.

Our first tests of sample socks show that athletes perceive the material as more comfortable on the foot than conventional yarn. We also note that wear resistance is at least as good, if not better, than the previous generation of Seger Sense Socks.

RECO NYLON Reco Nylon polyamide thread is one of the most eco friendly alternatives to classic yarn. Reco Nylon consists of 100% recycled material, made from waste from the textile industry. The manufacture of Reco Nylon reduces, among other things, the use of resources, such as water, chemicals and energy consumption, by an average of 89% compared with the manufacture of ordinary polyamide. Socks made using Reco Nylon have a high level of comfort and are extremely durable.

GORE-TEX INFINIUM™ is a very thin, lightweight membrane that provides total wind protection and excellent ventilation simultaneously. The membrane's micro-pore structure keeps cold wind out while allowing moisture to escape, keeping you dry, warm, and comfortable.

BAMLANA is an ecological material made of bamboo fibers and merino wool. It is 100% natural and provides outstanding moisture transport, ventilation, and thermoregulation. Furthermore, Bamlana is odor resistant, lightweight, soft, and very comfortable to wear. Oeko-Tex approved.

PIUMAFIL® contains a mix of hand-picked cotton and natural Kapok. The combination gives a feeling of unique lightness and a remarkably mild and silky smooth product that leads moisture away from your body.

MERINO SHEEP WOOL is fine and silky soft. Its unique structure provides exceptionally high thermal insulation. This wool warms when it's cold and breathes when it's hot – thus enabling a constant body temperature. It has good moisture-wicking capabilities which facilitate a dry, comfortable feeling next to the skin. Unlike other materials, merino wool warms even when damp. Creatine in the wool makes it naturally antibacterial and frees you from unpleasant odor in your socks.

EXP 4.0 WOOL is specially treated via a unique formula that contains fewer chemicals (e.g., chlorine) and uses up to 50% less water than older treatments – to make wool that withstands machine washing and drying. EXP 4.0 is the first wool treatment that meets these rigorous standards: Bluesign®, Global Organic Textile, and Oeko-Tex.

FRICTION RELIEF has got numerous advantages:

- Minimum friction compared with other fibres and solid materials. Even when the socks are wet.
- Wear-resistant and non-bobbling even when compared with polyamide.
- Good resistance to chemicals, so it can be washed again and again.
- Does not absorb water, dries quickly, which reduces friction.
- Repels oil – easy to keep clean.

- Flameproof (LOI of 95 %). Used for fire brigade garments.
- UV resistant. We give a 20-year guarantee on the surface structure of the material.
- Excellent colour fastness.
- Resistant to biological fouling.
- Antibacterial yarn.
- Does not shrink during washing, tumble-drying, boiling or steaming.

DRI-RELEASE® is a unique fabric that feels like cotton and keeps wearers comfortable, dry and odour-free. Made from a patented yarn, with just a trace of natural fibers. Dri-release® combines the best of both qualities - it wicks moisture away from the skin and it's soft to the touch. A Freshguard® treatment embedded in the yarn virtually eliminates odour.

THE COMPRESSION KNITTING in our socks enables increased pressure on bodytissue, which triggers faster blood flow from muscles back to the heart during rest and activity. Compression can press waste out of body tissue, which contributes to faster recovery after training or competition. This makes for healthier muscles and reduces muscle soreness. Seger invested in its own compression lab – to develop and refine compression sock functions.

RECO NYLON Polyamidtråden Reco Nylon är ett av de mest miljövänliga alternativen till klassiskt garn. Reco Nylon består av 100% återvunnet material, gjort av avfall från textilindustrin. Tillverkningen av Reco Nylon minskar många olika saker. Bland annat användandet av resurser som vatten, kemikalier och energi, med i snitt 89% jämfört med tillverkning av vanlig polyamid. Komforten på strumpor stickade med Reco Nylon är hög, liksom slitstyrkan.

GORE-TEX INFINIUM™ är ett lätt och mycket tunt membran som skyddar mot vinden samtidigt som det ger en mycket god ventilation. Membranets mikroporer stänger ute den kalla vinden medan fukt och överskottsvärme tillåts passera från insidan, vilket ger ett torrt, varmt och behagligt mikroklimat.

BAMLANA är ett ekologiskt material tillverkat av bambufibrer och mulesingfri merinoull. Det är ett hundra procentigt naturmaterial som ger utmärkt fukttransport, ventilation och värmereglering. Bamlana är dessutom luktsäsong, lätt, mjukt och mycket bekvämt mot huden. Öko-Tex märkt.

PIUMAFIL® är en blandning av finare handplockad bomull och naturligt växande Kapok. Kombinationen ger en känsla av unik lätthet och en anmärkningsvärd mild samt silkeslen produkt som transporterar fukten bort från huden.

MERINOULL. Merinofårets ull är extra fin och krusig. Dess unika struktur ger exceptionellt hög värmeisolerings. Merinoull värmer då det är kallt och andas när det är varmt, vilket ger en jämn kroppstemperatur. Ullen har bra fukttransporterande förmåga vilket ger en torr och skön känsla närmast huden. Till skillnad från andra material värmer merinoull även när den är fuktig. Kreatinet i ullens gör den naturligt antibakteriell och gör att du slipper dålig lukt från dina strumpor.

EXP 4.0 ULL innebär att ullens specialbehandlas med en unik metod som innehåller mindre kemikalier (klor) och använder upp till 50% mindre vatten än vid gamla typer av behandling för att få ullens maskintvättbar och torktumlingsbar. EXP 4.0 är den första ullbehandlingen som svarar upp till de högt ställda kraven för "Bluesign™", "Global Organic Textile (G.O.T.S)" och Öko-Tex-standarden.

FRICTION RELIEF

Ett unikt, slitstarkt material med många goda egenskaper.

- Lägsta friktion jämfört med andra fibrer och fasta material.
- Står emot slitage och nopning mycket bra
- Står emot kemikalier bra och kan tvättas om och om igen.
- Absorberar inte och torkar snabbt, vilket ger minimal friktion.
- Oljeavstötande och lätt att hålla rent.
- Flamsäkert (LOI på 95 %). Används i brandskyddsplagg.
- UV-resistent. Vi ger 20 års garanti på materialets ytstruktur.
- Utmärkt färgfasthet.
- Motstår biologisk påväxt.
- Antibakteriellt garn.
- Krymper inte av tvättning, torktumling, kokning eller ångning.

DRI-RELEASE® Ett konstfibrermaterial med bomullskänsla. Dri-release® ger en skön, torr och luktfri strumpa. Gjort av ett patenterat konstfibrergarn, med spår av naturfibrer, kombinerar Dri-release® de bästa egenskaperna av dem båda. Det stöter bort fukt samt är mjukt mot huden. Behandlat med Freshguard® som motverkar dålig lukt.

KOMPRESSIONSTRUMPOR är stickade för att ge ökat tryck på vävnaderna som i sin tur gör att det blir ett snabbare blodflöde från musklerna tillbaka till hjärtat under både aktivitet och vila. Kompressionen kan även rensa vävnaderna på slaggprodukter, vilket bidrar till snabbare återhämtning efter träning eller tävling. Det ger dig piggare muskler och mindre träningsvärk. Seger har investerat i ett eget kompressionslabb för att utveckla och förfinas funktionen på alla kompressionsstrumpor.

RECO NYLON Le fil en polyamide RECO NYLON est l'une des alternatives les plus écologiques au fil classique. Le Reco Nylon est composé à 100 % de matériau recyclé, produit à partir de déchets de l'industrie textile. La production avec du Reco Nylon permet de réduire, parmi bien d'autres choses, l'emploi des ressources comme l'eau et les produits chimiques, mais aussi la consommation d'énergie, de 89 % en moyenne par rapport à la production de polyamide traditionnel. Le confort offert par les chaussettes tricotées en Reco Nylon est élevé, tout comme leur robustesse.

GORE-TEX INFINIUM™ est une membrane très fine et légère offrant simultanément une protection totale contre le vent et excellente aération. Sa structure à micropores bloque l'infiltration du vent tout en laissant l'humidité s'échapper, pour vous maintenir au sec et au chaud.

LE « BAMLANA » est un tissu écologique innovant composé de fibres de bambou et de laine mérinos. Ses fibres 100 % naturelles assurent une excellente régulation thermique, et un niveau inédit d'aération et d'absorption de l'humidité. D'autre part, le Bamlana capte les mauvaises odeurs et offre légèreté, souplesse et douceur. Il est conforme à la norme Oeko-Tex.

Le PIUMAFIL® consiste en un mélange de coton cueilli à la main et de Kapok naturel. Cette association crée une remarquable sensation de légèreté pour un résultat doux et soyeux, qui capte et éloigne l'humidité du corps.

LA LAINE DE MOUTON MÉRINOS est fine et soyeuse. La composition unique de ses fibres procure une isolation thermique exceptionnelle. En effet le mérinos a la capacité de réchauffer par temps froid et d'aérer par temps chaud, régulant ainsi naturellement la température corporelle. Il capte et évacue l'humidité pour procurer une sensation de sec et de confort au contact de la peau. Contrairement aux autres fibres, le mérinos réchauffe même par temps humide. La créatine présente dans la fibre est un antibactérien naturel qui lutte efficacement contre les mauvaises odeurs dans vos chaussettes.

LA LAINE EXP 4.0 est une laine spécialement traitée avec notre formule unique, qui contient moins de produits chimiques (absence de chlore) et utilise jusqu'à 50 % moins d'eau que les traitements conventionnels – pour obtenir une laine aux propriétés uniques, qui résiste au lavage et au séchage en machine. EXP 4.0 est le premier traitement pour lainages respectant simultanément les normes suivantes, réputées pour leur niveau d'exigence : Bluesign®, Global Textile bio et Oeko-Tex.

FRICTION RELIEF

La propriété anti-frictions offre de nombreux avantages :

- Le taux de friction est minimal par rapport à la plupart des fibres, et ce, même quand les chaussettes sont humides.
- Résistance à l'usure et ne peluche pas, tout comme les fibres de polyamide.
- Bonne résistance aux produits chimiques, et donc à de multiples lavages en machine.
- Fibre peu absorbante, qui sèche rapidement et réduit la friction.
- Repousse l'huile – facile à nettoyer.
- Antidéflagrante (LOI de 95 %). Utilisée pour les vêtements de sapeurs-pompiers.
- Résistance aux rayons UV. Une garantie de 20 ans vous est fournie sur la structure de surface du tissu.
- Excellente stabilité des couleurs
- Résistance à l'encrassement biologique
- Propriétés antibactériennes de la fibre
- Ne craint pas le lavage en machine, le sèche-linge, le nettoyage à haute température ou à la vapeur.

DRI-RELEASE® est un tissu unique comparable au toucher au coton, qui offre une sensation de confort et de sec, et capte les mauvaises odeurs. Tissé avec un fil breveté, il comporte une touche de fibres naturelles. DRI-release® combine deux qualités : il évacue l'humidité de la peau et offre une incomparable douceur au toucher. Le traitement Freshguard®, incorporé à la fibre, permet d'éliminer les odeurs.

LE TISSAGE COMPENSÉ permet d'exercer une forte pression sur la plante du pied, pour faciliter l'afflux de sang vers le cœur pendant l'activité et le repos. Le tissage compensé permet l'évacuation des toxines et déchets des tissus corporels, pour contribuer à une récupération plus rapide après l'effort. On obtient ainsi une meilleure tonicité et une réduction des douleurs musculaires. Seger a par ailleurs investi dans un laboratoire de fabrication de tissu compensé pour développer et perfectionner les techniques de compensation de ses produits.

TERMO ORIGINAL 2.0	78 - 79
TERMO LIGHT 2.0	80 - 81

Made in EU, designed and knitted in Sweden.

With roots dating back to the 1920's, it's safe to say we know our field. When many Swedish manufacturers relocated their production abroad, Termo chose to stay. The innovative climate, along with a solid level of education and attention to quality were all decisive factors when we decided to remain in Sweden. Considering the acclaim from both press and industry for our innovative achievements, it's a decision we have never regretted.

We develop and manufacture all fabrics in our own knittery in Sweden. Termo's design department continuously develops new styles, which are then sewn up in our own testing department. Here, we try out seams, fits and so on until the garment is approved for production - which takes place in the EU.

We knit our own fabrics.

We always say that the heart of Termo is our knittery. This is where everything begins. We have developed all our fabrics in the knittery since 1921, making us confident enough to say that we know what we are doing. We use only Oeko-tex certified yarns, and thus all our fabrics are OEKO-TEX® certified.

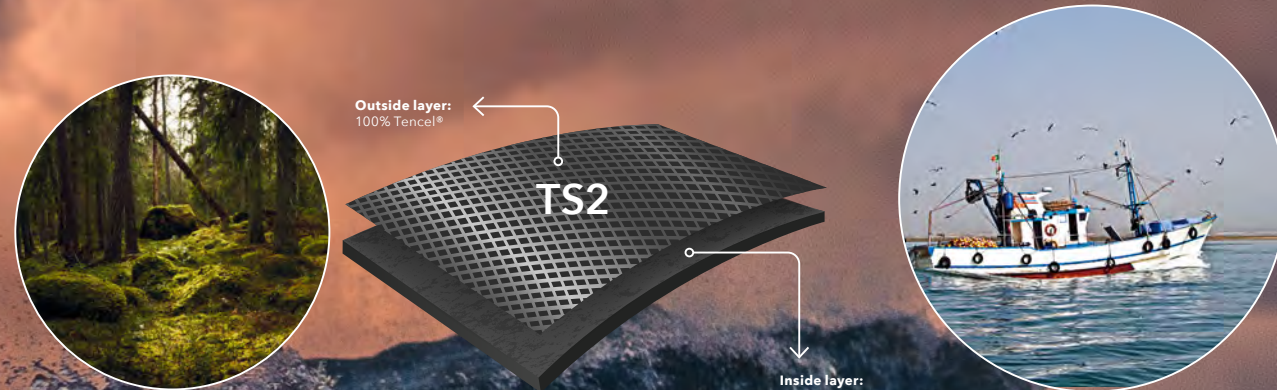

We check the yarn quality upon arrival. After knitting and dyeing, our fabrics are put through testing before they are approved for production.

SEAQUAL

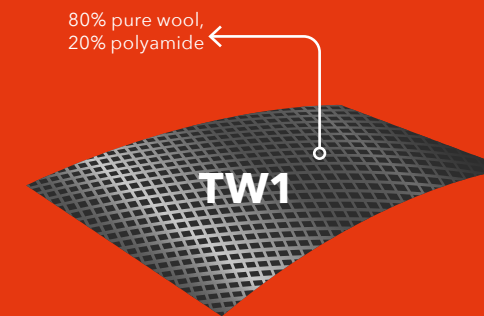

TS2: Seaqual and Tencel®

Termino Seaqual is the latest addition to our range of Termino Originals Baselayers. In a time when sustainability and environmental responsibility are more and more important, we have developed an extremely eco-friendly and high-performing functional fabric in two unique layers. Our own knittery is the origin. Layer 1, closest to the body, consists of Seaqual,

a polyester yarn spun from a blend of plastics, collected from oceans and beaches, and recycled polyester from PET bottles. Layer 2 is a functional Tencel with an extreme ability to absorb moisture from layer 1. Tencel is antibacterial and prevents odour.

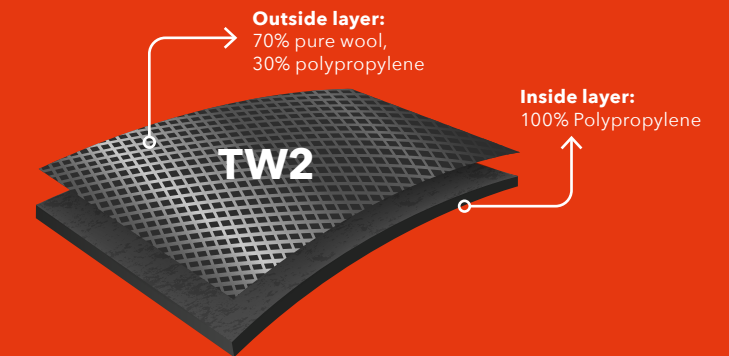

TW1: Wool and polyamide

Wool is inherently antibacterial, which prevents odour. All our garments are knitted from mulesing-free wool, and the low micron value prevents itching. The Termino Wool range consists of two different fabrics.

TW1 is a 1-layer knitting, ribbed for increased elasticity where you have the wool directly on your body. We only use the finest Merino wool with a micron value of max 19,5. Termino Woolnet is a unique, net-knitted fabric made from wool and polyamide for increased durability and elasticity. Woolnet is a very warm fabric when you wear something on top of it. In the holes created by the net knitting, the air becomes warm.

TW2: Wool and polypropylene

The air stays closest to the body and keeps you warm. For increased durability, the wool yarn is reinforced with 20% polyamide, also providing increased elasticity.

In our 2-layer knitting, TW2, we have chosen to combine Merino wool with polypropylene. Layer 1, closest to the body, is knitted in a polypropylene, ribbed loop terry, keeping you dry. The ribs and loops let air remain, which insulates and warms your body. Layer 2 is knitted from fine Merino wool with a micron value of max 19,5. The surface is water and dirt repellent as well as naturally antibacterial.

TO2: Tencel® and polypropylene

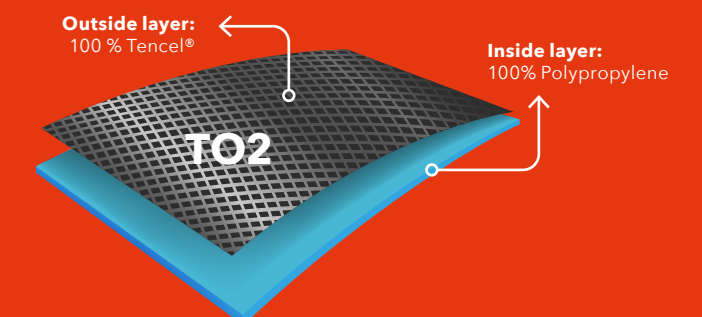

Termino's major breakthrough on the market for undergarments in Europe came in the 1970's, when we developed these garments for the Swedish Defense. We were assigned to equip Swedish commando soldiers with the best imaginable undergarments.

The garments developed were named Hunter Termino and were a tremendous success among the soldiers. The Hunter Termino also became very popular among soldiers and hunters, mainly in Europe.

The original was made with a cotton outside and a rib-knitted, polypropylene terry inside. Today we know that cotton is not the best option for functional garments, nor the most eco-friendly. Therefore we have updated our Hunter Termino to Termino Original 2.0.

Our new, upgraded Termino Original 2.0 is a rib-knitted terry with Tencel on the outside and polypropylene closest to the body. The combination of Tencel and polypropylene has sig-

nificantly improved the moisture-transporting and warmth-insulating qualities of the fabric. Tencel, a cellulose fibre that is naturally antibacterial, is high-absorbent, making the garment fast-drying. The unique composition of materials in Termino Original 2.0, in combination with its 2-layer ribbed terry knit, leaves us with one of the very best undergarments on the market - for the customer as well as for the environment.

Termo Seaqual Jaquard

Termo Seaqual Jaquard is our latest addition, with a focus on design, function, sustainability and environment. We hope you like it. Termo Seaqual Jaquard is a 2-layer fabric with high levels of moisture transportation and warmth insulation. Layer 1 consists of Seaqual, a polyester yarn spun from a blend of plastics,

collected from oceans and beaches, and recycled polyester. Layer 2 is made from yarn-dyed Tencel, which is a naturally antibacterial fibre. The garments absorb moisture and transport it to layer 2, making the drying process quick. Use the garments for outdoor physical activities like skiing, walking and so on.

Fabric: TS2: Two-layer Seaqual and Tencel®
Composition: Inner layer: 100% Seaqual (Polyester)
 Outer layer: 100% Tencel.

Termo Wool Original 2.0

Made from the finest merino wool and polypropylene, Termo Wool Original underwear is durable and soft. It's constructed for cooler temperatures and will keep you warm, dry and fresh. Merino wool is nature's own solution to regulating temperature, while also being odour resistant. Termo Wool Original has a high comfort level thanks to breathability, softness and moisture.

These are garments to wear when you switch from active mode to sitting still. Ideal for the hunter who sits still after a walk, or for the outdoor worker in the winter. The garments have robust cuffs and practical thumb-and-hand sleeve openings. The fabric is naturally antibacterial to prevent odour. Very popular among hunters and outdoor workers in the Nordic countries, where winters are colder.

Fabric: TW2. Two-layer polypropylene and wool
Composition: Inner layer: 100% Polypropylene
 Outer layer: 70% merinowool / 30% Polypropylene

Termo Wool Light 2.0

An astonishingly soft and elastic wool garment for use all year round. It will warm you up when it's cold and cool you down when it's warm. The 19,5 micron factor means it won't itch. The wool being naturally antibacterial means that odour is prevented.

Perfect for situations where you have no access to washing, like extensive stays in nature, and perfect for anyone who likes to wear wool all year round. The durability is high, just like the elasticity. All of this has made Termo Wool Light a staple among craftsmen.

Fabric: TW1. One-layer wool and polyamide
Composition: 80% merinowool / 20% Polyamide
Sizes: ♂ XS-3XL
♀ XS-2XL

Termo Original 2.0

This is our old faithful servant, loved by hundreds of thousands of soldiers and craftsmen since its appearance on the market in the 1970's. The low-maintenance fabric means the garment will keep its shape through many, many washes. The design with raglan sleeves increases the wearer's mobility, making the garments a perfect fit for active people. The Commando Termo, as it is often called, comes with a roll neck for windy days. It also has a robust cuff with a thumb-and-hand sleeve opening. It's popular among hunters as well as craftsmen, who often switch from sitting still to moving around, and don't want to wear wool.

Termo Light 2.0

This is our most popular year-round fabric, suitable for most activities. Through its unique 2-layer knitting, it will always keep you dry closest to your body. The fabric transports any moisture rapidly to layer 2, which is made from Tencel.

Ideal to wear for outdoor workouts. Great moisture transportation to layer 2, and very quick-drying. The fabric cools your body down when it dries, making it a great choice for exercising outdoors.

Fabric: TO2. Two-layer polypropylene and Tencel®
